**DETAILED ACTION**

***Allowable Subject Matter***

Claims 1, 3-9, 11-34 are allowed.

The following is an examiner's statement of reasons for allowance: In an interview on 5/28/2008, the inventor, Mr. Wobber discussed the structure and use of his invention along with the criticality of the design of the anchor channel including the inwardly-sloping, angled distal end. Mr. Wobber discussed that the angle is important not only in terms of enhancing the strength of the wall/key/anchor interface, but it is important for maximizing the strength of the metal as it is galvanized. Without the angle, the material buckles when hot-dipped; and with the angle, the anchor withstands the hot-dipping process.

It was also discussed that the Freeman reference as modified by Hobbs would render the Freeman reference inoperable for its intended use. The Freeman reference is also designed to flex to allow a structural member to fit into the channel where the walls of the invention of the instant application are designed to be completely rigid and not flex, thus allowing the wall/anchor/key interface to be strong. The examiner agreed that although the shapes of the two inventions are similar and both are placed on a structure to hold another structure within a channel, the flexing of the channel wall differentiates the instant application from the prior art invention. A further search was

Art Unit: 3635

conducted for the channel shape in combination with a masonry key. However, the structure was not found.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
